

Window Films

- Solar heat and glaze control window films
- Privacy and frosting window films
- Safety and security window films

About us...

Imageworks are a North East based company offering the supply and installation of solar, privacy and decorative window films to both commercial and domestic clients.

We offer a nationwide installation service with a team of qualified and experienced fitters that are fully trained in the installation of window films, including frosted manifestation film, solar protection film, fade and glare protection film and safety and security film.

Every installation carried out by Imageworks will comply with the Glass and Glazing Federation's guidelines, and all of our installers carry CSCS cards. Our fitters are also fully PASMA trained, allowing them to work at height.

Our fitters have experience of fitting window films at a wide range of premises including offices, sports centres, schools, public buildings and private residences.

For more information on our range of window films, or our installation services please call us on **0191 2655353** or email us on sales@imageworksne.com and we will be happy to help.

Application and Solutions

Window films are used to improve existing glazing systems by reducing excessive solar heat gain, cutting out solar glare, reducing fading on upholstery and fabrics and provide one way vision privacy.

Studies have shown that variations from 20 -23C in workplace temperature have a considerable effect on productivity and quality. Solar window film helps by reducing solar heat gain, maintaining a more stable and comfortable environment.

As much as 90 per cent of all fading is caused by solar energy, of which ultra-violet light causes 40 per cent, visible light 25 per cent and solar heat 25 per cent.

Solar window film slows down this effect by as much as a half. In other words, it doubles the life of fabric or furnishing.

As well as our range of architectural window films we also supply and install bespoke frosted glass manifestations.

Health and safety legislation stipulates that all commercial buildings with full height glass must have some form of manifestation on the glass for public and employees' safety. This is usually in the form of two rows of dots or squares at different levels (Between 850mm and 1000mm high from finished floor level and the higher between 1400mm and 1600mm)

The manifestation can be used to provide privacy, safety, decoration or a mixture of all three. Frosted window film has moved on from a simple strip, circle or square to include corporate logos or designs.

Window film ensures damaged windows stay in place and can hold dangerous shards together, keeping people safer.

It also has the benefits for security. It creates an invisible barrier to your building that can mitigate against damage from a bomb blast or other explosions.
